System Change Mentorship Program [SCMP]

Overview

Systems Change is an intentional process designed to fundamentally alter (or create) the components and structures that cause a system to behave in a certain way. The Systems Change Program (SCP) is a 15-month systems transformation process designed to fundamentally develop the components and structures of key systems that drive outcomes in higher education institutions (HEI). It takes a systems approach and implementation grant to drive the targeted institutional transformation. The program identifies leads from HEIs as champions for change and takes them through expert training and mentoring, and provides them with funding to improve on and develop new systems within their department or institution.

The Systems Change Mentorship Program (SCMP)

Through this program, HEIs that will be selected as mentors receive the needed resources to help mentees from other HEIs using different strategies (Job shadowing, seminars, and workshops). By offering continuous support, mentors also work to help mentees develop proposals that target employability and career service systems within their institutions.

Why Get Involved

The [Education Collaborative](#), in partnership with [Kepler](#), seeks to create and expand a pool of HEIs that are exemplars in different fields to collaboratively work to build capacities in African HEIs to lead the transformation process, encourage institutional participation, as well as ensure growth and sustainability of resulting projects and outcomes. As a mentor institution, apart from the networking opportunity afforded by the program across the continent, institutions will also learn and access information regarding different grant opportunities and attend various capacity-building forums to learn about a myriad of strategies to manage and scale other programs within their institutions effectively.

Signing Up

The Education Collaborative and Kepler invite interested HEIs to join our pool of potential mentors and be considered for the SCMP in this and future cycles of the SCP. To sign up, email either of the contact persons listed below expressing your interest in joining. In your email, mention the HEI you are from, your position and your department.
